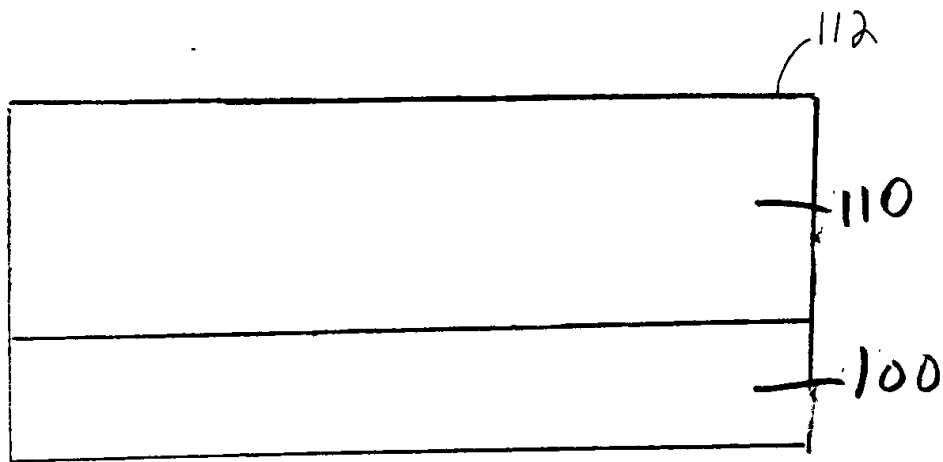

FIGURE 4

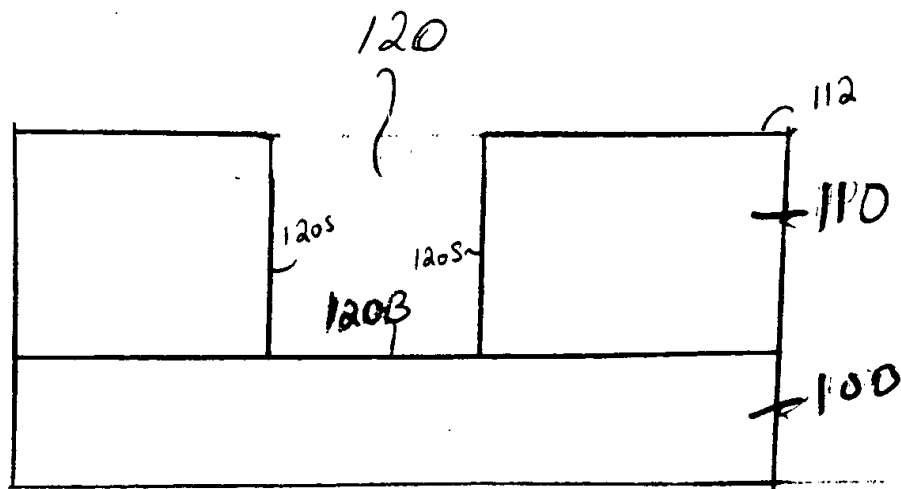

FIGURE 5

A cross-sectional view of a semiconductor device. A base layer 100 is shown at the bottom. Two raised regions, 110 and 112, are formed on the base layer. Region 110 is on the left, and region 112 is on the right. Both regions have a top surface 120 and a side surface 120S. A gap 120B is formed between the two raised regions. A layer 130 is formed on the top surface 120 of region 112.

A hand-drawn schematic diagram of a device. It consists of a main rectangular body with a horizontal base labeled 100. The top portion of the body contains two rectangular openings. The left opening is labeled 110 with an arrow pointing to its right side. The right opening is labeled 112 with an arrow pointing to its right side. A horizontal line, labeled 130, separates the top openings from the base. Above the right opening, there is a small rectangular protrusion labeled 140. A label 120 with an arrow points to the central area between the two openings.
